

Pure, Safe & with No Artificial Substances

CONTAINS NO:

- ✔ Lactose or Milk Proteins
- ✔ Egg
- ✔ Soy
- ✔ Peanuts or Tree nuts
- ✔ Grains, Wheat, Barley, Corn, or Gluten
- ✔ Seafood
- ✔ Artificial colors or preservatives

Allergen
✔ Free

To deliver all the Health promoting benefits of our Concentrated High Quality Probiotic simply

1.

Shake bottle for 5 to 10 seconds

2.

Pour 5 drops onto spoon, food or drink

3.

Give orally

Introducing SGL PROBIOTIC DROP

*Special
Probiotic Drops
for Infants & Children*

1 200 MILLION LIVE LACTOBACILLUS REUTERI

2 5 EASY DROPS PER DOSE

Supplements Global LLC

The Importance of Beneficial Bacteria

The **MICROBIOME** is a collection of beneficial bacteria that lines the digestive system. Its establishment is especially important in newborn babies where it serves several important functions:

- ✔ Helping proper digestion of newly encountered foods
- ✔ Optimum absorption of minerals, vitamins and nutrients
- ✔ Regularity
- ✔ Preventing ingested infectious environmental microbes from causing harm

Effects of Modern Lifestyle

Newborn's get their first inoculation of beneficial bacteria from their mother during vaginal birth and subsequent breast feeding. However, today's modern lifestyle has disrupted this inheritance due to several factors:

- ✔ The rise in caesarean births
- ✔ Increased use of formula over breast milk
- ✔ Ubiquitous use of antimicrobials in food and drink
- ✔ Overuse of antibiotics and other medications

Mothers who spent their lives exposed to food preservatives and occasional antibiotic and medication prescriptions may be unaware of their own depleted **MICROBIOME**. The result is even natural birth and breast feeding may not be enough to help establish the crucial beneficial microbial defence system in their infant's gut.

Negative Health without Probiotics

Without a system of beneficial probiotics protecting an infant, a number of chronic digestive and immune conditions may occur:

- ✔ Lack of proper nutrient, vitamin, and mineral absorption
- ✔ Food and Environmental Allergies
- ✔ Indigestion, Constipation, Bloating, Gas, Colic
- ✔ Colonization by Yeasts, Molds, and Infectious Bacteria
- ✔ General Irritability

Our SGL Probiotic Drop for your Child's Health

Daily supplementation with our high quality **SGL PROBIOTIC DROP** probiotic can help promote & protect the health of your Infant. Just 5 drops delivers the following probiotics for your infant:

Lactobacillus Reuteri	200 Million CFU
-----------------------	-----------------

**TOTAL IN EVERY DOSE =
200 Million PROBIOTICS**

The Importance of strain found in SGL Probiotic Drop

The included powerful Lactobacilli Strain mainly colonize the small intestines of infants. The strain establish an environment that acts as a barrier to infectious microbes from colonizing the digestive system. In addition, they aid in the initial stages of digestion.
